Agent Remarks

Summer is flying by and fall is quickly approaching. I know am looking forward to the cooler weather, along with wrapping up my wedding planning for my wedding in October. State fair is upon us as well. I look forward to watching our Scott County 4-H and FFA members exhibit their projects this year.

I know many farmers are busy. Whether that be preparing for harvest, making hay, or weaning calves. This time of year can be considered the calm before the full swing of the fall rush. The majority of this months articles pertain to getting producers ready for the upcoming busy season.

The event section is also longer this month. Check out the flyer for the feeder calf grading school happening at the Stockyards on September 8th. This will be a very hands-on practical training for beef producers. You can also find the dates and information for the Scott County Soil Conservation Fall Harvest Banquet, Scott County 4-H Open House, Farm City Banquet, Beef Bash, and more.

Have a great August! Stay safe! Brittany

Tips for Harvesting and Storing High Quality Corn Silage

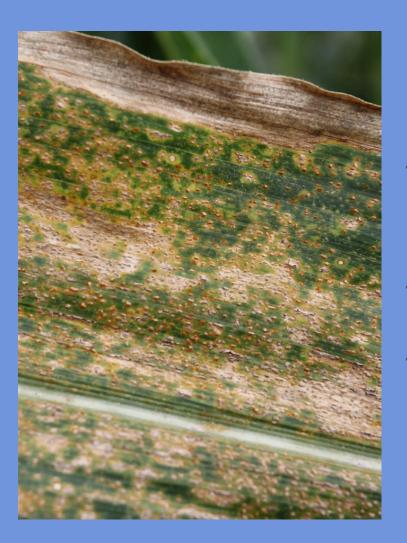

••••••

-Donna M Amaral-Philips

Corn silage forms the backbone of many winter and year-round feeding programs for dairy cows and heifers. Corn silage is an excellent source of energy that can reduce the costs of providing energy (starches) in the dairy cow's diet while also serving as a digestible fiber source. Paying attention to a few details while harvesting and storing corn silage can help ensure that a high quality feed is preserved.

These details are outlined below.

Late Season Corn Disease Identification

-Bayer Crop Sciences

- for corn diseases depends on proper identification of the disease, the severity of the infection, and the anticipated spread of the disease.
- The information below can help identify late-season foliar, stalk, and ear diseases of corn and their management tactics.
- While some of these foliar diseases can occur during the early season and midseason window, they occur most often in the late season, from tasseling to black layer.

Ag Economics and Policy

Thoughts on Two Big Cattle Reports

-Southern Ag Today

The July Cattle and Cattle on Feed reports from USDA provided indications that the cattle herd is approaching a low in inventory but may not be there just yet. The mid-year Cattle report provided a first estimate of the 2025 calf crop, which is projected to be roughly 1.3 percent smaller than the 2024 calf crop. Combined with January's report of fewer beef cow replacement heifers, this is an indication that the cattle herd may still be smaller come January 2026.

Real Estate Rising: Farmland Values Hit Record High

-Daniel Munch, AFB

Agricultural real estate values increased by \$180 an acre over last year, according to USDA's National Agricultural Statistics Service (NASS).

The Land Values 2025 Summary Report, released on Aug. 1, shows a 4.3% increase, bringing the average to \$4,350 per acre. This follows a 5%, or \$200, increase between 2023 and 2024 and marks the fifth consecutive increase in agricultural land values. Cash rent values for cropland were up 0.6% to a record \$161 per acre and pastureland rent stayed flat at \$16 per acre.

Forage News

Stockpiling for Fall Grazing

-UKY Forages

Now is the time to prepare for stockpiling fescue pastures. Simply follow the guidelines:
Choose a strong tall fescue sod in a field that is well drained. To get the maximum yield response to nitrogen applications you will need a healthy stand of tall fescue. Choosing a field that is well-drained will help to ensure that the stockpile can be grazed with minimal pugging damage during the wet winter months.

Overseeding Pastures in Kentucky

-Ray Smith

Overseeding of pastures is an excellent management tool that improves pasture production, forage quality, and ensures a good ground cover the following year without major pasture renovations. Overseeding consists of planting seed in a field with existing grass cover in order to fill in bare patches and thicken the stand. It can be done over the entire pasture or limited to trouble areas.

Forage Timely Typs

- Do NOT graze cool-season pastures closer than 3 to 4 inches to conserve soil moisture and to prevent overheating of the crowns.
- If drought conditions limit pasture growth, close off pastures and feed hay in a sacrifice area.
- Graze warm season annuals or perennials to allow cool season grasses to recover.
- After the first good rain in August, seed winter annuals (such as small grains, ryegrass, crimson clover, and brassicas) for late fall and early spring grazing.
- Plant alfalfa after first good rain in August to allow sufficient size going into winter and reduce potential for sclerotinia damage.
- Consider renovation of cool-season grass pastures that have thinned.
- In mid-August to early September, exclude livestock from pastures to be stockpiled and apply 60 lb N/A and any need P and K

·····AUGUST·····

Fresh Corn with Jalapeño Peppers

2 cups water

1 cup jasmine rice 2 teaspoons cumin

6 ears fresh corn

2 to 4 fresh jalapeño peppers

1 large tomato

2 tablespoons chopped pimento peppers 1/3 cup diced red onion 2 tablespoons butter 1/4 teaspoon salt

¼ teaspoon salt Pinch of black pepper

Bring water to a **boil** in a medium saucepan. **Stir** in rice and cumin, **cover** and **reduce** heat to low. Do not remove lid while rice is cooking. **Simmer** 12 minutes then stir. **Cover**, **turn off** heat and let rice **set** an additional 10 minutes or until tender and all the water is absorbed. **Wash** all fresh ingredients. **Cut** corn kernels off cob. **Dice** jalapeño peppers and tomato. You may want to wear gloves while dicing the hot peppers. **Combine** corn, jalapeños, tomato, pimento peppers, onion, and butter

in a microwave-safe bowl. Cover and cook in microwave oven on high until heated through, about 4 to 5 minutes. Stir every minute. Add salt and black pepper. Combine corn mixture and cooked rice. Fluff mixture with a fork.

Strategies for Easing the Weaning Process for Beef Calves

-Barbi Riggs, Chad Mueller, and Reinaldo Cooke

Weaning is considered one of the most stressful periods in the productive life of a beef calf. During the weaning process, calves are exposed to various stressors that include removal from their dam, physiological changes (actively developing lean tissue or muscle), castration, vaccination, dehorning, exposure to novel pen or pasture environments, possible changes in feed and water sources, and for many spring-born calves, exposure to season climate changes.

Tips for Selling Sheep and Goats Through Public Livestock Auctions

Susan Schoenian

There are many advantages to marketing livestock through a public livestock auction, sale barn, or stockyard. It is convenient and easy. There are usually regular weekly sales. Sometimes, there are special graded sales or sales that cator to the increased demand for sheep and goats prior to various religious holidays.

Four Autumn Feeding Facts for Horses

-Kentucky Equine Research Staff

As summer transitions into autumn, new horse-keeping challenges arise. Be on the lookout for these four potential problems.

- 1. Deteriorating pasture quality warrants a diet overhaul.
 - 2. Autumn pasture or forage can present risks.
- 3. Wilting maple leaves can be especially problematic, even fatal.
 - 4. Manure stockpiling leads to parasite woes. Click <u>HERE</u> to read more!

Enhancing White-Tailed Deer Habits on Your Property: Food Plots

-Robert A. Pierve, Emily Flinn, Paul Lowry and Brab Mormann

Landowners who are managing their land for white-tailed deer may consider planting food plots to provide a supplemental food source (Figure 1). On some properties, establishing and maintaining food plots can provide supplemental food and nutrition for deer, but food plots should never be considered a substitute for managing the native vegetation to provide quality food sources. In situations where food plots would contribute to deer management objectives, the plots need to be established and maintained properly.

9:00 AM - 3:30 PM C. ORAN LITTLE RESEARCH FARM

Visit this link or scan the QR Code to register: bit.ly/register-for-SHPwebinar

Goat Health and Care Sept. 22

During this session, Extension Specialist, Dr. Brady Campbell, will review proper care for goats of all ages and explain how to help keep them healthy and continue production.

Farm Business and Management Oct. 6

Extension Specialist, Eric Richer, and Extension Educator, Pressley Buurma, will help guide participants in farm management strategies and provide options for enterprise budgeting and record keeping as it relates to goat production.

Goat Processing Oct. 20

Throughout this presentation, Extension Specialist, Dr. Lyda Garcia, will explain the cuts of a carcass and how to process a goat at home.

Livestock Marketing Nov. 3

Join us as Extension Specialist, Garth Ruff, discusses the ins and outs of the goat market. He will also discuss how to market goats to fill the current wants and needs of the customers.

Hay and Grain Production

Nov. 17

Throughout this session, Extension Educator, Jordan Penrose, will present tips and tricks on hay and grain production for goats as well as what type of crops would work best for your production system.

Coyote Management

Dec. 1

This session is going to focus on how to manage interactions between coyotes and goats. Experts will also explain the current status of coyote research in Ohio.

Open Forum: Ask Me Anything Dec. 15

Have a burning question that was not answered during one of our past webinar sessions? Join Extension Educators and Specialists to get your questions answered!

Webinars are hosted via Zoom (7-8 p.m. EST). Register at:
